Galleries :

The Klein bottle

Construction of a Klein bottle by joining the edges of a rectangle.

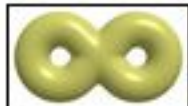

Added on 2010-02-10

The figure 8 Klein bottle

The less-known form of the Klein bottle...

Added on 2010-02-10

From an octagon to a genus 2 surface

An octagon can be bent into a genus two surface (a surface with two holes) by joining the sides with the same colour..

Added on 2010-02-10

From a 40-gon to a genus 10 surface.

A polygon with 40 edges can be bent into a genus 10 surface (a surface with 10 holes).

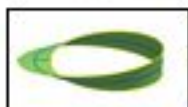

Added on 2010-02-10

The cross-cap.

The construction of the cross-cap.

Added on 2010-02-17

Moebius strip and cross-cap

Visual proof that a Moebius strip is homeomorphic to a cross-cap with a disc removed.

Added on 2010-03-01

Connected sum of two real projective planes

Visual proof that the connected sum of two real projective planes is a Klein bottle.

Added on 2010-02-10

Dodecahedral tessellation of the hypersphere

A dissection of the 120 cell in twelve rings of 10 dodecahedra. Two sets of six rings form 2 solid interlocked tori. The film starts by showing the 600 cell, the dual of the 120 cell.

Added on 2010-02-21

Moebius-Klein

Two Moebius strips make a Klein bottle

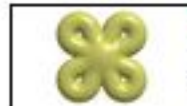

Added on 2010-02-10

Multiple Klein bottles

Linked Klein bottles. Note that the number of bottles needs to be uneven in order to have a surface.

Added on 2010-02-10

From a 16-gon to a genus 4 surface

A polygon with 16 sides can be formed into a surface, a surface with 4 holes.

Added on 2010-02-10

The real projective plane and a strip

The real projective plane minus a disc is homeomorphic to a strip.

Added on 2010-02-10

The Boy surface

The construction of a Boy surface.

Added on 2010-02-17

The Klein Quartic II

The transition from a hyperbolic 14-gon surface, while preserving the tiling by 21 triangles.

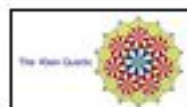

Added on 2010-02-10

Connected sums of real projective plane and torus or Klein bottle.

Visual proof that the connected sum of a real projective plane and a torus, and the connected sum of a real projective plane and a Klein bottle are homeomorphic.

Added on 2010-02-20

The Klein Quartic I

How this hyperbolic tiling can be folded into a surface.
